

ARCHITECTURE: INFORMATION ARCHITECTURE

We have significant experience implementing the following for our clients:

- Provided a deep understanding of client enterprise content types before implementing.
- Engaged with key content owners early on to understand and translate user interaction with the content.
- Integrated our thorough understanding of content into the information architecture governance plan.
- Created custom content types to meet the unique business needs of the client and increase user adoption.
- Configured metadata for content types to contribute to the enterprise requirements of client's information presentation needs.
- Utilized SharePoint content building blocks (site collections, sites, libraries, lists and folders) to serve up custom information architecture to best represent the client's content to the right audience.
- Designed an extensible architecture that scaled up to embrace new content types as your company grows.
- Implemented finely-tuned and custom enterprise search based on configured metadata.
- Provided Careful selection of architecture building block types to balance the flow of information.
- Increased user adoption with efficient metadata schema and taxonomy management.
