VIRTUALDEVELOPER

ARCHITECTURE: SERVICE APPLICATION CUSTOMIZATION

We have significant experience implementing the following for our clients:

- Used deep knowledge of SharePoint's service infrastructure to give the client custom service applications uniquely suited to their business needs.
- Supported and extended the client's business IT vision with uniquely design service applications that fit into the overall enterprise architecture and met performance requirements while satisfying user requirements for features.
- Used custom service applications to allocate intensive processing from the Web Front End servers on to load balanced application servers.
- Used custom service applications to enable other SharePoint server farms in the architecture to offload their processes to a dedicated set of application servers.
