

## MANAGED SERVICES: ENTERPRISE ARCHITECTURE

We have significant experience implementing the following for our clients:

- Leveraged client's business strategy and guidance to build the architecture.
- Served as advisors to client's IT strategic planning effort.
- Translated client business vision into effective enterprise change through systems and software.
- Used superior technology to directly increase client's business value.
- Supported the governance needed to implement a holistic enterprise architecture.
- Architected site-to-site and point-to-site Azure virtual network integration.
- Created hybrid cloud solutions to on premise networks.
- Implemented and configured Azure storage solutions.
- Integrated applications with third-party systems such as WorkDay, Facebook @ work and Yammer.
- Designed Azure infrastructure as a Service with virtual networks and machines.
- Architected SharePoint 2016 upgrades for the On-Premise farm, using multiple servers to host distributed search components.
- Planned, deployed, maintained, and customized the client's SharePoint environment in a datacenter that we maintained.
- Architected eDiscovery, electronic content management and records management to align with client's requirements.
- Architected Azure Active Directory integration including application, user and server authentication.
