

Supply Chain Management Enabled by Blockchain

Blockchain is highly compatible with the supply chain process, as it can be used to track both the structure of a digital record, and its state as it moves between multiple parties from the supplier all the way to the consumer.

Our Formal Media™ technology securely synchronizes digital records with the corresponding smart contract on the blockchain distributed ledger providing an immutable audit trail for multiple parties to a transaction.

Blockchain in Supply Chain Management

Why Clients Use our Blockchain Consulting Services

- Synchronization of enterprise digital records with smart contracts.
- Integrated blockchain as a service functionality.
- Microsoft's enterprise regulatory and compliant data protection.
- Microsoft's scalable Azure cloud computing infrastructure.

Financial Benefits

- Potentially 70% return on investment
- Cost reductions from the removal of third parties and intermediaries.
- Track the structure and the state of the product through the supply chain delivery process.

Strengthened Security

- Benefit from the experience of over 3500 security professionals.
- Stronger security, threat protection & regulatory compliance.
- Regulatory compliant standards & guidelines.

Business Efficiencies

- Reduce delays from paperwork by using smart contracts.
- Faster transaction processing and time to market.
- More trust as provenance is tracked.
