VIRTUALDEVELOPER

TOOLS AND TECHNOLOGIES: AZURE

We have significant experience implementing the following for our clients:

- Provided Azure Infrastructure as a Service (Iaas).
- Provided Azure Platform as a Service (PaaS).
- Configured Azure virtual machines, storage and virtual networks for client systems.
- Architected site to site and point to site Azure virtual network integration and hybrid private cloud to on premise networks including web application proxies (WAP), perimeter (DMZ) zones, ADFS and ADFS proxies.
- Implemented and configured Azure storage solutions including blobs, SQL databases.
- Designed Azure IaaS virtual networks and virtual machines.
- Configured Azure network ACLs and end points.
- Configured Azure virtual machines for disk caching and redundancy.
- Implemented and configuring Hadoop clusters on Azure using HDInsight.
- Integrated SharePoint applications with Azure streaming media services and creating media indexes for SharePoint Search.
