FORMAL MEDIA ENTERPRISE EDITION

NOVEMBER 2019

Project Description: Digital Workplace for Enterprise Collaboration & Document Management

Formal Media Enterprise edition seamlessly integrates Office 365 with Facebook's Workplace (Facebook at Work), to provide enterprise level social networking and document management. It incorporates robust precision search based on SharePoint's taxonomy term store, and an innovative corporate broadcasting system (Mosaic Tiles).

Virtualdeveloper.com designed this product for interoperability with Windows 10, and Office 365. The product includes a SharePoint Workplace APP that underwent rigorous testing before being approved for sale in the Microsoft APP store. I have plans to incorporate Formal Media™ into the Azure Marketplace. The product has the following characteristics:

Mosaic Tiles • Share your relevant files, photos and announcements on our immaculately designed Mosaic Tiles landing page module. • Automatically integrate Workplace by Facebook, and Yammer. • Securely and individually edit tiles with administrative privileges using managed metadata. • Your videos, news feeds, documents and events can even be laid out for your employees to easily access.	
Precision Search • Simplify your users searching with our Search Suggest App. • The user can either select a document from the grid, or select a suggested search item to bring them to the Search Results page. • With Search Filters you can easily find the documents or pages you're looking for. • Filter your search by Department, Location or other prerequisites defined by you. - Easily clear your filters to start	

over. - Upcoming events section located on the right hand side of the page.	
<u>Discover People</u> • Search for users with the Discover People App. • Search Criteria are configurable so you can search by Name, Department, Location, or other Customizable fields. • Each Profile has the user's name, information, and buttons that allow you to Praise, Follow, Email or Skype call the user right from the App.
